PROJECT PROPOSAL WRITEUP TEMPLATE

Title Page

Institution Name: Name of the University.

Project Title: A clear and concise title that reflects the nature of the project under your area of study.

Student Name(s): Full name.

Admission Number:

Course Name: Your Program of Study.

Supervisor's Name:

Submission Date:

Abstract

This is a brief overview of the project, including the main objectives, methodology, and expected findings. This should be about 150-200 words.

Should be one or two paragraphs.

Should be on a fresh page.

Declaration [on a new page]

Declare that you are the owner of the work.

Give provision for you to sign and also your supervisor to sign.

Acknowledgment [on a new page]

Acknowledge any support etc.

Table of Contents (must be automatically generated. Do not do it manually)

List of all headings and subheadings with page numbers.

Should be on a new page

Chapter One: Introduction

1.1 Background

Provide a comprehensive background of your project, introducing the field of study, the technology or problem area being investigated, and the relevance of the study in today's context.

1.2 Problem Statement

Clearly state the specific problem your project aims to address. Explain why this problem is significant and how it affects users, organizations, or systems.

1.3 Objectives

This section is divided into two.

1.3.1 Main Objective: What is the overall goal of the project? This should be related to the title of your project.

1.3.2 Specific Objectives: List the specific objectives to be achieve within the project. They should be between 3-4. Not more than that.

NB: Outline the primary and specific objectives of the project. Ensure that each objective follows the SMART criteria (Specific, Measurable, Achievable, Relevant, Time-bound

1.4 Justification

Provide a rationale for the project, explaining the importance of solving this problem. Describe who benefits from your project, what is the novelty of your project and how your project contributes to the body of knowledge in IT.

1.5 Scope and Limitations

Define the boundaries of your project in terms of what will be covered (scope) and what will not be covered (limitations). Mention technological, time, or resource-related constraints.

Chapter Two: Literature Review

2.1 Introduction

Give an overview of the literature review section, stating its importance in guiding the development of your project.

2.2 Review of Related Works

- **Existing Solutions:** Discuss existing studies, technologies, systems, or methodologies that have addressed similar problems. Include critical evaluations of previous works.
- **Technology Overview:** Provide a review of the technological tools, platforms, or frameworks related to your study (e.g., programming languages, databases, frameworks, and tools).
- **Research Gaps:** Identify gaps in the current literature or technologies, highlighting where your project differs or improves upon existing solutions.

2.3 Theoretical Framework

Describe any theoretical or conceptual frameworks guiding your project. If relevant, discuss the models or theories related to software development, system design, or information technology practices.

2.4 Summary

Conclude the chapter by summarizing key points from the literature that inform your project, identifying areas that have not been adequately addressed, and setting up the rationale for your proposed solution.

Chapter Three: Methodology

3.1 Introduction

Introduce the methodology section, stating its purpose and how it guides the successful implementation of your project.

3.2 System Design [VERY IMPORTANT. DIAGRAMS MUST BE VISIBLE]

- **System Architecture:** Describe the architecture of the system or solution you intend to design. Use diagrams (e.g., block diagrams, flowcharts, or UML diagrams) to illustrate.
- **Modules/Components:** Break down the system into smaller modules or components, explaining the purpose of each.

3.3 Tools and Technologies

- **Programming Languages:** Mention the programming languages you will use (e.g., Python, Java, etc.).
- **Frameworks/Platforms:** Specify any frameworks or platforms that will be involved (e.g., Django, Flask, React, Android SDK).
- **Databases:** If relevant, mention the databases you will use and their role in the system (e.g., MySQL, PostgreSQL, MongoDB).

3.4 Data Collection/Requirements

- **Data Requirements:** Specify the data needed for the system (e.g., input data from users, external APIs, or datasets).
- **Data Sources:** Identify where the data will come from (e.g., databases, APIs, or user input).
- **Data Collection Methods:** If applicable, outline how data will be collected for the project (e.g., surveys, interviews, data scraping).

3.5 Development Approach

- **Development Model:** Specify (with the reason(s) the development methodology you plan to follow (e.g., Agile, Waterfall, Spiral).
- **Phases:** Outline the stages of your project development process (e.g., planning, design, implementation, testing, deployment).

3.6 Testing and Validation

Explain the testing strategies you will employ to ensure the solution works as expected:

- **Unit Testing:** Testing individual components.
- **Integration Testing:** Testing the interaction between different modules.
- **User Acceptance Testing:** Ensure the system meets end-user requirements.

3.7 Project Timeline and Budget.

Provide a detailed timeline (e.g., a Gantt chart) outlining the key phases and milestones of the project with deadlines for each.

State the budget.

References (On new page) - Use APA Style

NB:

1. Your proposal may not include all the sections in this template but it should follow this guide.

2. Font: Use times new romans; font size 12 [Except first page which can be bigger font]; Justified alignment.

3. Start each chapter on a fresh page.
